Suggested Improvements

Suggested Improvements for CW

Green = Done

Automation Improvements

1. *Update Zaps that are using legacy version of apps*

Every year or so, Zapier releases new versions of their apps. This requires a manual update on our end. Most often, it only requires re-connecting the account. Legacy versions might incur errors. Additionally, new features might be available, and more importantly newer versions are debugged in comparison to previous ones.

Improvement idea: update legacy version of apps.
Stage: 1
Effort: low
Reward: fewer errors due to bugs, new features.

2. Cleanup of unused automations

Zoho has many automations that are currently not being used or that are not correctly set up. Cleaning this up, and consolidating these automations with the ones on Zapier, would lead to better data flow & better understanding of the CRM.

Stage: 1
Effort: low
Reward: even though the automations are not being used -so they are essentially doing nothing- it would make it easier to see what the actual process is like for someone new. Plus it clears the view.

Trial Class Improvements

1. Differentiate No Show and Canceled trials in Zoho

When the lead status is updated to ‘Trial No Show’ or ‘Trial Cancelled’, the same automation triggers in Zoho: an automated FLUP that is meant for ‘No Show’ only. Currently, canceled trials are automatically updated in Zoho for 4 locations only (see section below). No Shows are not automatically updated.

Lead is updated to Trial Class Cancelled or No Show	Deletes Trial Class Date	1. 48 hours after: Sends email ' Trial Class No Show - 1' 2. 7 days after: Sends email 'Trial Class No Show - 2' 3. 12 days after: sends smooth message 'Trial No Show' 4. 60 days after: creates task 'Start Free Trial FLUP process'

A new FLUP intended for ‘Canceled’ trials should be created.

UPDATE: SEE TEMPLATES HERE **CW Trials Email Templates**

Improvement idea: create separate automations for both cases.
Stage: 1
Effort: low
Reward: Communication with lead would be better suited for cancelations. Better tracking as distinction will be made between No Shows & Cancelations.

2. Fix SBM Automations in Zapier

When a trial class is booked through SimplyBookMe, it triggers automations built in Zapier. Currently, these automations are set up to update the following fields:

- First and last name (last name is updated to “-lastname” or “no lastname” in some)
- Email
- **Lead source:** it sets the lead source to “Trial Class”
- Phone
- Lead status: set to “Trial Class Booked”
- Lead source platform: set to SBM + “self assigned”
- Intro notes
- Trial Class Date

These fields are updated regardless of whether the lead already exists in the CRM or not. If a lead already exists, and has a lead source assigned, the automation overruns it, causing the loss of previous data.

Improvement idea: rebuild the automations so that they first search for the lead in the CRM. If the lead is found, then just update the corresponding fields (lead status, trial class date, etc). If the lead does not exist, the automation would create it and assign ‘Trial Class’ as a ***temporary*** lead source.

In the future, and to eliminate ‘Trial Class’ as a lead source, UTM tracking can be added to the SimplyBookMe links.

Stage: 1
Effort: Low
Reward: better, more accurate lead source tracking

3. Create automations for canceled trials

When a trial class is canceled in SimplyBookMe, similarly as a new booking, it triggers automations in Zapier. This time, the status is updated to ‘Trial Class Canceled’. However, only

four locations have automated this process: Arlington, Needham, Westborough, and Westford. Otherwise, the status has to be manually updated.

When this happens -either manually or via Zapier-, there's an automatic FLUP in Zoho, a combination of emails and SMS that are sent to the lead.

Points to consider

- How often does this happen? That is, how often does a family cancel a trial instead of just not showing up?
- Why do only some franchisees have this automation?
- The 'No Show' and the 'Canceled' FLUPs are the same.

Improvement idea: create Zaps for the rest of locations to simplify canceled trials tracking.
Stage: 1
Effort: medium
Reward: automated process instead of manual. Standardized process across all locations.

4. Trial Show tracking

There's no way to automatically track attendance. Also, the current process only contemplates the 'No Shows', and the status has to be manually updated in Zoho to trigger the FLUP mentioned above. There's no reflection in Zoho when a child attends a trial class. SimplyBookMe only recognizes when there's a new booking or when a trial is canceled. There's a feature that we can use to create custom statuses like 'Trial Class No Show' or 'Trial Class Attended'. These statuses would have to be manually updated in SBM, but then this can trigger updates in Zoho.

~~Since a manual input would be required either way (either updated in Zoho or on SBM), the decision here relies on what's easier for the franchisee, and if we are interested in keeping the data in SimplyBookMe updated.~~

Improvement idea: for a quick implementation, an email with a short form could be automatically sent to the franchisee the same day or the day after the trial is supposed to take place. In the form, we would ask if {{student_name}} attended the trial or not. If the answer is yes, then that could trigger 'Begin Post Trial FLUP' in Zoho. If the answer is no, updated status to 'Trial No Show' and begin FLUP. In the future, a unique platform to handle bookings and classes would be simpler. Alternatively, we can use the custom status mentioned above with a similar flow.

Additionally, a new status 'Attended Trial Class' should be created in Zoho.
Stage: 1
Effort: medium
Reward: better attendance tracking.

Website Improvements

1. Adding a form before SBM and ICP links in the website'

Though this might be intentional, families self-booking a trial before contacting us sometimes leads to unnecessary work (for example, if a class is not suited for the child then there's the extra work of having to discover this), and the possibility of creating an account in ICP leads to confusion (families are prompted to pay but may be wanting to book a trial, for example)

Points to consider:

- Is the data for how often a lead self books a trial or enrolls in ICP before talking to us available?
- To book a trial class, it is required to create an account in SBM.

Improvement idea: before redirecting the leads to SBM and ICP, make them fill a website form. Then, if they want to continue the process, the form can redirect them to either platform, but if not then we would at least have their information.Use thecodewiz.com/westford-ma as a benchmark, the 'Try a Free Class' button redirects to a form first, not SBM. This does not happen for the rest of locations. We could even explore passing lead information from the website form to SBM or ICP pop-up, so that leads won't have to fill out their info 2x.

Stage: 2
Effort: medium
Reward: forcing the leads to pass through the whole funnel standardizes the sales process. Data gets uploaded automatically in Zoho, so there's no need to download leads and upload them there.

2.Standardize forms OR create tracking system

Currently, not every page has the same format. This is not an issue per se, but standardizing the websites would make it easier to track which forms lead to a higher conversion. Additionally, the hypothesis is that a lead that fills more forms is more likely to convert -due to higher intent-, so creating a system that tracks how many forms a leads has filled in the page could be beneficial.

Points to consider:

- Do we need all the different forms on the website?

Improvement idea: make forms constant across all websites and creating a tracking system.
Stage: 2
Effort: medium/high
Reward:

Ideas for the future

Lead Sources Improvements

It has been discussed before, but now that there is a true mapping of the tech stack, and understanding how the data flows in the system, we have the chance to actually make the changes previously outlined in this document. This might be implemented in the future, after the improvements outlined above.

Point of consideration:

- Do we update the historical lead data or just start new.

Better Enrollment Tracking in Zoho

What happens when a family enrolls? Do they get an agreement document, or just by creating the account and associating the payment is enough?

Because if they do get some sort of document -or if we can start doing so- then we could automate converting the lead into contact, eliminating the manual process

What other ‘triggers’ can we consider here?

Consolidating SBM and ICP

These two platforms do not talk to each other, making it hard to handle capacity in an efficient manner. Research for a unique app that can manage both trials and enrollments is needed.
