Tab 1

1. New Trial-Booking Automation

Original setup

- Trigger: “New Trial” in SimplyBookMe
- Action: **Create/Update Module Entry** in Zoho CRM

Issue

- The “Create/Update” action first searched by email.
- If the email wasn’t found, it attempted to create a new lead—but failed whenever that phone number already existed under a different email.

Revised flow

1. **Trigger** on “New Trial” in SimplyBookMe
2. **Find Module Entry** in Zoho CRM by email
    - If found → Update these fields:
        - Lead Status
        - Trial Class Date
        - Date Trial Class Was Created
    - If not found → proceed to step 3
3. **Find Module Entry** in Zoho CRM by phone number
    - If found → Update the same fields as above
    - If not found → **Create** new lead record (Lead Source = “Trial Class”)

View Zapier flow

---

2. Lead-Source Preservation

Original behavior

- All lead fields—including **Lead Source**—were overwritten on every trial booking.

Issue

- Existing leads lost their original source (e.g. “Phone Call”), skewing attribution and reporting.

Change

- **Existing leads**: only update trial-specific fields (class date, creation date, enrolled class).
- **New leads**: create with “Trial Class” as the **Lead Source**.

---

3. Cancellation Handling

- **New automation**: When a family cancels a trial in SimplyBookMe → update Zoho CRM **Lead Status** to **“Trial Class Cancelled.”**
- **Leads added onto Zoho Workflow**
    - **https://crm.zoho.com/crm/org672522016/settings/workflow-rules/3406649000230690042**

View Zapier flow

---

4. Attendance Tracking

Background

- Added two custom statuses in SimplyBookMe:
    - “Trial Class No Show”
    - “Trial Class Attended”

Automation

- When a franchisee marks either status → Zapier captures it → updates CRM **Lead Status** accordingly.

View Zapier flow

---

5. CRM Workflow & Communications

Original workflow

- One Zoho workflow handled both “No Show” and “Cancelled,” sending **No Show** messaging in both cases.

Improvement

- Split into two distinct workflows (Trial Class Cancelled workflow, Trial Class No Show workflow)
- Developed and queued a dedicated **“Trial Class Cancelled”** email template (awaiting approval before activation).

---

6. Website Form-Response Automations

Issues identified

1. One web form was connected to **two** Zaps → inconsistent processing & duplicate entries.
2. Notification email step had **expired credentials**, so franchisees weren’t alerted.

Resolutions

- Consolidated to **one Zap per form**.
- Re-authenticated the email action → restored lead-notification delivery.

Link to Zapier folder

---

7. Updating Apps in Zapier

Issue

- Many Zaps used **legacy versions** of apps (Zoho CRM, Gmail, etc.), missing bug-fixes and stability improvements.

Improvement

- Upgraded each app to its **latest, debugged version** to reduce potential errors.

---

8. Cleanup of Unused Automations

- **Removed** obsolete Zaps and Zoho workflows to streamline the interface and clarify which automations are active.

Fay's Changes

Fay's Changes

- Turned off all zaps w FB lead ads.
- Ring Central seems to trigger multiple runs for 1 phone call. This causes errors because two zap runs are running concurrently for the same lead. This was creating issues with CRM duplicates. I now added a 'delay after queue' action item to space out the runs. To be monitored.
- I updated SBM zaps for Mableton & Plainsboro for duplicate handling. There was an issue where a lead was found with email & then I went to update the phone # & it would error because another lead existed with that phone #. Those two leads should ideally be merged. I've created an email automation to notify me when those need to be merged & zap needs to be re-run. Eventually, we can send this to the franchisee.
- I updated the Cancelled SBM Trial zap for Needham because the account in the trigger was for Westford…
    - To investigate: why is it erroring so often with cancelled trials not being found in the CRM? How come the trial booked leads aren't going into the CRM?
- I updated the IClassPro Mailchimp → Zoho CRM All Zees Zap with the same duplicate handling logic as above. Some notes on the new flow.
    - Added delay after queue, as many runs were triggered at the same time.
    - When lead exists in the CRM, status is changed to 'Contacted'. Lead owner & lead source are not overridden. Tag "ICP Lead" is added.
        - When a CONTACT exists in the CRM, the flow stops.
    - When a lead doesn't exist in the CRM, lead is created with 'Contacted' status, ICP Lead tag & CW System as the owner (CW workflow will then assign the owner based on the territory). Lead source set to ICP Leads.
    - To investigate: what is the cadence expectation that has been set with Jelly? Franchisees complain that leads are added too late into the system from ICP.
    - To consider: do we convert these leads to contacts??
- New cancelled trial workflow: https://crm.zoho.com/crm/org672522016/settings/workflow-rules/3406649000230690042
- ERRORS W RING CENTRAL
    - Triggers coming in empty, giving the following error: The app returned "Resource for parameter [subscriptionId] is not found".
    - Westford ✅, Westborough, Rutherford✅, Durham ✅
    - North St. Pete✅
    - All SBM Location PW
        - rutherford@thecodewiz.com (or westford@thecodewiz.com … etc.)
        - C0deW1z!23

Help from Eduarda

- High Priority
    - Duplicating new mableton & plainsboro (& now North St. Pete) SBM zaps for all other active locations
- Low Priority
    - Consolidating all duplicate app account connections
    - Deleting all app connections with 0 active zaps

Comms Doc for Franchisees

Note: this is a copy of the live doc shared with franchisees

For Franchisees: System Improvements & Automations Updates

1. Trial Class Booking → CRM Updates & Data Management

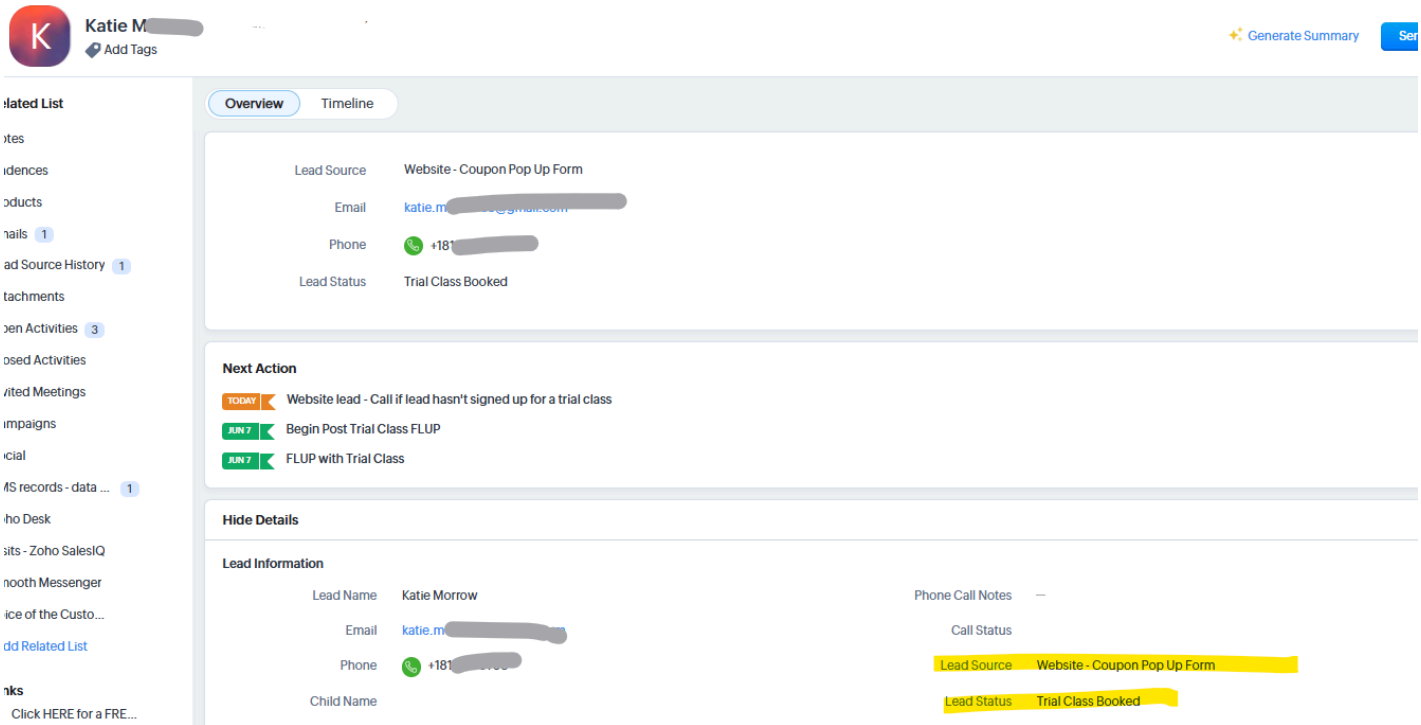

Previously, when a new trial class was created in Simply Book Me, the following actions would happen.

- If lead found in CRM
  - Lead source updated to “Trial Class”
  - Lead status updated to “Trial Class Booked”
- If lead not found in CRM
  - Lead created
  - Lead source set to “Trial Class”
  - Lead status updated to “Trial Class Booked”

Multiple issues were happening here. Duplicates weren’t being handled. Sometimes a lead was found with the same phone # but not email, or vice versa. Now, all these cases are being accounted for. Another issue was that lead source was being overridden. Trial Class shouldn’t be considered a lead source, but rather a lead status/phase.

NEW PROCESS:
Trial class created in SBM. Note: all other automations (tags, tasks, etc.) remain the exact same.

- If lead found in CRM
  - Lead source NOT updated. Original lead source is maintained
  - Lead status updated to “Trial Class Booked”
- If lead not found in CRM
  - Lead created
  - Lead source set to “Trial Class”
  - Lead status updated to “Trial Class Booked”

2. Cancellation Handling

NEW PROCESS:

When a family cancels a trial in SimplyBookMe, the following actions happen

- Lead status updated to “Trial Class Cancelled”
- NEW FLUP assigned to lead: “Trial Class Cancelled FLUP”
    - New email templates specifically for cancellations
    - Same process as Trial Class No Show, with different email templates for cancellations.
- Demo Video: https://share.vidyard.com/watch/pAbZ5pkymaHNF8XwXvYmeD

Trial Cancelled 1

Subject: Your Trial Class at Code Wiz Was Cancelled – Let’s Reschedule!

Hi there ${Leads.First Name}!

I’m sorry we weren’t able to hold your CodeWiz trial class as planned. We understand that sometimes things come up, and we’d love to help you find a new time that works best for your schedule.

To pick a fresh slot for your trial class, simply click the link below:
${Users.Trial Class Link}

If you have any questions- whether it’s about our curriculum, how to prepare, or anything else- please don’t hesitate to let me know. I’m here to help!

Looking forward to getting you started soon!

${userSignature}

Trial Cancelled 2

Subject: Still Interested in Your CodeWiz Trial Class?

Hi ${Leads.First Name},

I just wanted to circle back—our records show your trial class didn’t get rescheduled yet, and I don’t want your child to miss out! At Code Wiz, we make learning fun and engaging, and we’d love to welcome you both soon.

Secure the perfect time for your trial by clicking here:
${Users.Trial Class Link}

If there’s anything holding you back—questions, concerns, or schedule conflicts—just hit reply and let me know. I’m happy to help in any way I can!

We’re excited to help your child explore the exciting world of coding soon!

Best,
${userSignature}

3. Attendance Tracking in SBM → CRM Updates & Data Management

NEW PROCESS:

Custom statuses will be added to your SBM account. For all classes in your SBM account, you will be able to mark students as “Trial Class No Show” or “Trial Class Attended”. This status will then get copied over onto Zoho CRM. Helping you manage your leads better in Zoho CRM. Previously, this was done manually. [Demo Video]
