Google Drive Folder
(monitored weekly by Google Apps Script)

Google Apps Script
(runs on schedule; lists new/changed docs; transforms the docs into PDFs and moves them to another folder; does not do instant triggers yet)

Manual Download via Terminal
(e.g., gdown)

Data Folder
(converted files from the google drive folder to PDF)

Processing Pipeline

Ingestion Pipeline
(Unstructured + PyMuPDF)

Chunking + Metadata
(RecursiveCharacterTextSplitter
+
metadata: source_pdf, bucket, status, user type)

FAISS Vector Store
(local similarity search embeddings)

QA Pipeline
(Prompt + RetrievalQA + GPT-4 Turbo)

Streamlit UI

User inputs

Logs file generation

Streamlit dashboard with the data from the file
